

## Language work: Passive voice

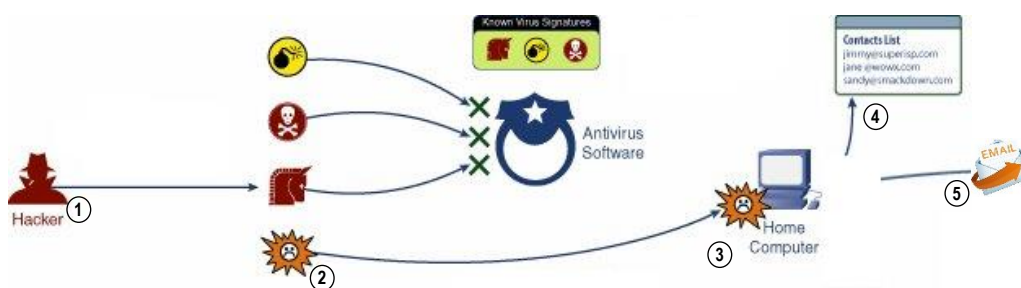

1. The information below refers to the physical connection of the different hardware components before you set up IPv6 service on the TP-LINK wireless router. Rewrite the instructions using the passive voice.

- First, you must power off your modem.
- Second, an Ethernet cable will connect the Internet port on your Router to the Modem's LAN port.
- After that, you connected your computer to one of the ports on the Router with another Ethernet cable.
- At this point, you can turn the modem on.
- Then, plug the provided power adapter into the power jack and the other end to a standard electrical wall socket.
- The process finished only when you have pressed the On/Off button to power on the Router.
