

## Teste Modelo – answers

Reading comprehension exercises:

- 1.T
- 2.F
- 3.F
- 4.F
- 5.F
- 6.T

### Vocabulary

#### A.

1. In a bus topology, if the central bus fails, the entire network goes down. **True**. In a bus topology, all devices are connected to a single central cable (the "bus"). If this central bus fails, communication across the network is disrupted, causing the entire network to go down.
2. A ring topology is easy to install and requires minimal cabling. **False**. Ring topology requires each device to be connected to two other devices, forming a closed loop. This can make installation and troubleshooting more complex, and it typically requires more cabling than simpler topologies like bus.
3. In a star topology, the failure of one device does not affect the rest of the network. **True**. In a star topology, each device is connected independently to a central hub or switch. If one device fails, it does not affect the others. However, if the central hub or switch fails, the entire network goes down.
4. Mesh topologies are typically used in small networks due to their simplicity. **False**. Mesh topologies involve each device connecting directly to multiple other devices, which makes them complex and expensive to set up and maintain. This topology is usually used in larger, more critical networks where reliability and redundancy are crucial, not in small networks.

#### B.

1. A software application that monitors and controls incoming and outgoing network traffic based on predetermined security rules. **Firewall**
2. A type of attack where an attacker attempts to trick individuals into providing sensitive information by pretending to be a trustworthy entity. **Phishing**
3. The process of converting information into a code to prevent unauthorized access. **Encryption**
4. Malicious software designed to harm or exploit computer systems. **Malware**

#### C.

- 1) into
- 2) out
- 3) in
- 4) out
- 5) in

## Use of English

A.

1. Although the website was a scam, it was populated with articles stolen from BBC News.
2. Despite being an excellent programmer, he has never been promoted.
3. He had a terrible headache. However, he went to the office.

C.

1. A pop-up suggesting that recipients install an Android app for added security is being launched by the attacker.
2. A form with his mobile number and details has been filled in by the recipient and sent to the attacker.
3. An SMS with a download link for iBanking is sent to the recipient's mobile by the attacker.
4. Disguised as a legitimate app, sensitive data will be leaked to the attacker by iBanking.
